

Microsoft SharePoint Services

Optimising SharePoint to Maximise Benefits

MSM specialise in optimising and enhancing Microsoft Office SharePoint Server (MOSS) installations to ensure businesses are maximising their return on investment and getting the most out of the solution.

MSM specialise in adding value to standard deployments and focus on the three key areas:

- SharePoint Application Development
- SharePoint Integration
- SharePoint Support and Maintenance

Enhancing Day to Day Operations

Many SharePoint vendors are only interested in out of the box implementations and don't consider the business case, long term function or integration of SharePoint into the business. At MSM we deliver a scalable and powerful solution that helps build efficiencies into the day to day operations.

MSM realise the full benefits of MOSS for our clients whether for effective document control or enterprise wide collaboration. We also understand the limitations that can occur if an installation is not adapted and integrated into the business process of the organisation.

SharePoint Application Development

Besides SharePoint's traditional use as a document collaboration platform, MOSS can now be used for a variety of functions such as corporate intranet portals, business applications, and reporting applications. It also serves as a platform for custom application development typically as part of an enterprise's Intranet or Extranet.

By using custom solutions within MOSS you can:

- Accelerate shared business processes through collaboration
- Effectively manage your information assets
- Aid the decision making process by creating centralised access to information
- Share business information
- Use a single integrated platform to manage your intranet, extranet, and internet applications.

MSM's SharePoint custom development services offer you improved organisational effectiveness by providing comprehensive control over electronic content; accelerating shared business processes; and facilitating better-informed decisions and information-sharing across boundaries.

SOFTWARE SOLVED

MSM SharePoint Integration Services

MSM know the limitations that a straight forward deployment of SharePoint can have on business process. It is common for organisations to consider business cases, but rarely do their suppliers consider the long term financial savings nor are they revisited to confirm expected financial savings were achieved. Our clients tell us that most other consultancies disregard the business case, preferring to maximise their own return.

MSM look to buck this trend to offer you an independent strategic consultancy approach that implements and enhances SharePoint portals to maximise the business case to achieve ROI, whilst offering the additional benefits of:

- Optimal use of SharePoint
- Seamless integration of MOSS with core business systems
- Reduced risk by letting our professionals carry out enhancements
- Proven process for project completion on time and on budget
- Ongoing support and maintenance.

MSM has gained an excellent track record of bespoke development for hybrid SharePoint and custom application deployment. With the aid of web parts we help businesses gain extra benefits by re-presenting business applications within the SharePoint framework.

SharePoint Support and Maintenance

MSM also provides support and maintenance of SharePoint systems to guaranteed Service Level Agreements (SLAs) for even the most business critical systems. We tailor SLAs to deliver customised response and fix times up to 24x7.

Our team of experienced SharePoint professionals can provide support of your SharePoint environment. Whether you are looking to complement your in-house IT help desk by escalating time consuming and urgent support issues or simply outsource all your SharePoint support, we can help by tailoring a support solution to meet your needs.

Unlike most SharePoint consultancies we follow the same rigorous processes that we use for supporting bespoke systems. This ensures that we reduce risk and improve quality of service for you, and ultimately delivering better uptime for your SharePoint solutions.
